## Shared folder android

Synology shared folder android. Shared folder android to pc. Shared folder android linux. Shared folder android virtualbox. Create shared folder android. Windows 7 shared folder android. Shared folder android windows. Whatsapp .shared folder android.

To access shared files on a Windows PC from an Android device, you can use a third-party app called File Manager ES File Explorer. Before rushing to do so, you need to verify that you have sufficient permissions to access the data. It is also necessary to verify that no firewall is blocking access to the files shared by the Android device. If either or both the above conditions are true, you need to ask the network administrator to grant the privileges required to allow access to objects through your Android phone. Assuming that you have granted all the permissions for shared data on the Windows PC, here is how you can download and install ES File Explorer File Manager on your Android phone and use the app to remotely access shared objects: â- Turn on the Your Android phone or tablet phone. Â- After unlocking, tap the Menu button to start the list of apps. Ã- locate and touch the Play Store app icon to open the Play Store app. Ä- Once the Play Store app has launched, type and look for the Explorer file manager Ex Explore in the search box located in the upper right corner of the screen. Å- From the open app page, touch the Explorer file manager file icon. Ä- On the next page, tap the Install button to download and install the ES Explorer Manager file Explorer app on the Android phone. Ä- Once the app is installed, tap Open to start the Explore ES Explorer Manager app. Ä- In the open interface, touch the network option located on the left pane of the screen. Ä- From the options available in the drop-down list, tap the LAN option to view available LAN computers. 10. If the destination computer is not visible in the list, tap the Scan button to scan Android phone and search for all available Windows PCs. 11. Once you find the PC, touch the target computer terminal icon. Note: You can identify the destination computer via your IP address used as the PC terminal name displayed in the LAN window. 12. When prompted, provide the correct user name and password, respectively in the user name and password fields. 13. Once done, it's ok to access Windows shared folders from your Android phone. Note: Do not share the user name and password of the computer with anyone. You need to log in or register to respond here. When you share a file or folder from your phone or tablet, you can choose exactly those who can view or edit the file. If you don't already have it, download the Dropbox mobile application for easier sharing. Do you still don't use Dropbox? See how Dropbox makes it easy to send large files. Share with an invitation via email Open the Dropbox mobile application. Touch the Ä, Ä, ä, (vertical suspension dots on Android) is, ä, Ä € (suspension dots on the iPhone / iPad) next to the file or folder youÄ € d like to share. Tap Share. Touch Invite File. Touch in Send to and type e-mail or person's name (or people) YouÄ € D Share with. Select View can or can change under the list of recipients. Tap Share. Share with a link Open the Dropbox mobile application. Touch the Ä, Ä, ä, (vertical suspension dots on Android) is, ä, Ä € (suspension dots on the iPhone / iPad) next to the file or folder youÄ € d like to share. Tap Share. Tap Copy Link. The link will be copied to the clipboard., Paste the link where youÄ € d like to share it. How useful is this article? Related Articles Community Responds How to Browse and Open Shared Folders of Windows and File Change PC from a mobile phone or Android tablet on a wifi network One of the simpler ways To access a PCA S folders remotely is to use shared folders of Windows. These folders are automatically visible on any other PC with Windows, while they are not automatically visible on an Android smartphone. In this guide we will then show you how to navigate shared Windows folders from the Android tablet or smartphone, so you can view, copy or change files stored in shared folders, without necessarily being in front of the PC. The only requirement is that all devices (PCs and Android smartphone / tablet) are connected to the same modem, not with which the technology (the PC can be connected via Ethernet cable or Wi-Fi, while mobile devices will necessarily have been connected to Wireless). Share a Windowsas folder written in the Windows file sharing guide, sharing a folder It can be used to open, transfer and work on files of another computer in the same network (LAN or Wi-Fi). To share a folder on the Windows and make it available on the network we follow the following steps: we right-click on the folder to share on Windows and enter the property, LETA s to switch to the Share tab and press the Share button to open Open Window file sharing. In this window, we enter the name of the user group with which you want to share the folder. In particular, we write everyone, we press on ADD and we give all the permits of reading and writing. Keep in mind that in this way all computers and smartphones on the network will be able to access this folder, even if they also need to know the computer € s login password.You can in fact choose between two types of sharing: protected by Password or open. If it is a home network to which you connect through a protected router, then you can do the open sharing, since only we access it. To change these settings, LETA S Access the Control Panel -> Network and Internet -> Network and Sharing Center, then click Change Advanced Sharing Settings. Scroll to the end of the page, open the All Networks section and deactivate (or activate) the password item protected sharing. The password for access to the shared folders is the same for accessing the operating system in case of secure access: in this regard, we invite you to read our access guide on Windows 10 without a password.Shared folders can Being displayed on the computer by clicking File Explorer next Network (in the sidebar on the left) and, finally, clicking on the name of our computer, appears here as a resource.access network a folder shared by Androidto access shared folders on Windows from a Android device, we will need to have a file manager with SMB support, which is the protocol with which Windows makes networked files and folders accessible. Below we will show you how to do with the best free file managers with the SMB support available for Android.Solid ExploreRoof of the best file managers we can use on Android for shared folder access is Solid Explorer. After installing this application on our device, press the + button on the bottom right and select the new remote connection item. In the window that appears, LETA S LAN / SMB tap, then followed; In the new screen, all actions active on our network will appear in seconds, we will only choose the correct one, select later, enable the Guest entry (if we have a share of without a password) or vocal username and password (if we have A protected quota) on the authentication screen, to select NO on the advanced settings screen and finally tap followed to add the folder to our System.The management folder will be added immediately to the left sidebar of the app, accessible whenever we want (any Access credentials will be saved automatically) .File Manageranother App Useful for Windows access shared folders is file manager, available for free for all Android devices. After adding the application for our Let S system to open it, touch LETA s on the remote icon and then add a remote location (even the + button at the top right is ok). In the overlay window that appears, select Local Network, we wait a few seconds to start the search for network shares in order to choose the one that fits us. The system will ask us what name to use for access credentials and sharing (if you give us t have a password, check the anonymous voice). At the end of the changes, it touches us ok to immediately add the shared folder to the resources available within the app. X-Plore File ManagerX-Pore is one of the historical applications for file management on telephones, present on the old Nokia Symbian and up to the present day on Android devices; In fact, we can download X-Plore File Manager free up And tablet with green robot. To use this file manager, touch Leta S at the top right on the roof Thea Leta s Expand the LAN menu, select the ADD item server and then the Voice scan item. The application will look for all computers with shared folders on our LAN; To add what Tap on your name. If sharing is not protected, shared folders will be immediately shown in the app tree structure, without having to do anything else; If instead sharing is protected, we will have to make a prolonged TAP up Computer name, select Add Servers and fill out the mandatory fields.conclusionsispispsispisptions Our Windows computer provides some network shares, we can easily access you using one of the files that we showed you in the guide. If instead, we try a way to synchronize some folders between computers and smartphones, we refer to reading our guide to the best Cloud app for Android and iPhone to save files without taking memory. Are we looking for a way to do it the reverse operation, ie to share some Android folders to make them available on Windows? In this case, we advise you to read our guide on how to share files and folders on the network on Android. Android.
